Legacy Pest Control Targets Mosquitoes Hot Spots

Let our team at **Legacy Pest Control** tackle your mosquito problem and we will target these little buggers' **hot spots**. One of the prime areas for mosquitoes is **shrubs**. We'll attack these areas along with **trees** to nab those mosquitoes hiding on the underside of the leaves. Mosquitoes tend to congregate in these spaces to escape predators and nature's wrath.

Let us get rid of your mosquitoes and you'll be able to enjoy your **backyard, patio, and deck** in peace. We'll **eliminate the problem** in a **prompt and completely safe** manner. You will not hesitate to venture outdoors once our pest removal experts treat the outside of your home and surrounding spaces with our **barrier treatment**. You'll let your kids outside to play in the yard without a second thought. Your pets can even enjoy the beautiful outdoors without suffering one mosquito bite after another. **Furthermore, you won't have to worry about the potentially deadly results of mosquito bites.**

About West Nile Virus

Mosquitoes view your yard as the ideal place to find food and reproduce. If you let mosquitoes have their way on your property, it will eventually be chock full of these annoying bugs. You will find it difficult to obtain any enjoyment from your front and back yards. Add in the fact that **mosquito bites jeopardize the health of your loved ones**

through the transmission of diseases and it is easy to understand why so many people are reaching out to our professionals for assistance.

Mosquitoes can carry and transmit a **number of different diseases** ranging from **malaria** to the **West Nile virus** and **encephalitis**. A brand new virus known as “**chikungunya**” emerged in the United States in 2014. It spurs **painful symptoms** including **nausea, headaches, fever** and **muscle pain**. **More than 1,000 Americans suffer a serious illness or perish each year as a result of mosquito bites**.

Facts About Mosquitoes

- Mosquitoes lay eggs in areas with *standing water as well as moist sections of soil*. These eggs eventually hatch into larva, advance to the pupa stage and eventually turn into adult mosquitoes with a craving for your blood
- The majority of mosquitoes cover less than a mile from their breeding site within their lifetime yet some travel upwards of 50 miles
- Mosquitoes *spread disease by feeding on an infected host and subsequently biting a person*
- Mosquitoes can lay upwards of *300 eggs at a time*
- Male mosquitoes *do not* feed on humans or animals. They consume nectar while female mosquitoes feed on human/animal blood to obtain the protein required to generate eggs
- It takes a mere *4 days* for a mosquito to transition from existence within an egg to adulthood
- There are *over 3,000 different species of mosquitoes around the world; 176 of them are recognized in the U.S.*

How to Prevent Mosquito Bites

The best way to eliminate your mosquito problem is to **reach out to our Utah pest control experts at [Legacy Pest Control](#) for assistance**. You can also be proactive by **implementing the following tactics**:

- *Drain containers containing water* so mosquitoes do not linger
- Get rid of *old tires and gutter debris*
- *Empty children's toys containing water*
- *Wash your pets' dishes* on a regular basis
- *Change the bird bath water* every week
- Use *Environmental Protection Agency-approved mosquito repellents like DEET and Oil of lemon eucalyptus*
- *Wear loose-fitting, light-colored garments when outdoors*. Pants and long sleeves are ideal
- *Put up screens* in the spring. Place them over windows and doors
- *Turn over or properly cover boats on your property* so they do not accumulate water
