Pests continue to be a problem for [homeowners](#) and [businesses](#) across the nation. From rodents to spiders to wasps, ***the spread of pests leaves our properties unclean, untidy, and potentially dangerous.*** Fortunately, there are plenty of options for those who are unlucky enough to have a few extra roommates in the attic in Morgan County. [Legacy Pest Control](#) is here to support you when exterminating pest infestations. As experts in the local Utah area, ***we help you to get rid of the critters and bugs in your home in Morgan County.***

Common Pests in Morgan County

At Legacy Pest Control, we're familiar with all sorts of pests, from small to large. In Morgan County, ***we experience a variety of creepy crawlies in buildings and know how to handle each situation correctly.*** Our Utah-based experts are trained in handling plenty of unpleasant pests in offices and homes. Take a look at just a few that we handle:

- **Rodents** – [House mice, voles, and rats](#) are common in Utah, and pose a sizeable health threat to humans, including the spread of Salmonellosis and Rat Fever. Not only do these rodents breed frequently, but ***they also contaminate food, chew wiring, and destroy surfaces.***
- **Ants** – Small but mighty, [ants](#) are terrorizers of homes. These pests are in constant search of shelter, food, and water, and travel in significant armies. ***Once you find one ant, it won't be long before you find more.*** As they can burrow into the building's wood foundation, it's critical to get these pests exterminated pronto.
- **Spiders** – These creepy crawlies head into almost every home in Morgan County to find shelter. Check your basement, garage, and crawlspace to find [spiders](#), but beware as ***some dangerous and poisonous breeds are even found in Morgan County,*** including the Black Widow spider.
- **Moths, Carpet Beetles** – These pests can create a large issue for any homeowner. As they ***feast on fabrics and animal skins, destroy books, papers, and surfaces,*** it's best to get such an infestation out of your home – quickly.

- **Wasps, Hornets, Yellow Jackets** – Wasps pose a large risk to homeowners, especially in Utah. ***They can be found anywhere – whether it's in the eaves of your roof or nestled in a tree in the back garden.*** With a large safety concern, it's best if the professionals remove these pests.
- **Box Elder Bugs** – Although Box Elder bugs aren't life-threatening, they can be annoying. ***If you have Box Elder or Maple trees in your garden,*** you're likely to have a few of these pests in your home or yard.
- **Bed Bugs** – Easily spread throughout homes and ***stubborn to remove,*** homeowners should always take precautions when there are any indications of a [bed bug infestation](#).
- **Termites** – [Termites](#) eat away at a home, damaging the critical structure. In short, ***termites are bad news for a property.*** The two common termites, Subterranean and Drywood, have different behaviors. Identifying which group is in your home is essential in order to know how to treat the infestation.
