## Syracuse Pest Control and Extermination Services:

**Ant Pest Control:** Any accidental droppings of small food particles and crumbs, which you may not even realize are there, can attract ants and lead to infestations. One of the techniques your Legacy professionals will use in the treatment of ants is to spray the most common entrance points and habitational areas, such as baseboards and windows.

**Bedbug Pest Control:** Bedbugs are one the most problematic infestations to have, interfering with the fundamental quality of life in one's home. Legacy treats the entire room to kill bedbugs and their larva, so that you may avoid their bites and enjoy a proper night's sleep.

**Cockroach Pest Control:** could surprise you at any time or place, especially during the night or in dark places within your home. Most commercial treatments fail to remove these very resistant and survival oriented pests. Cockroach infestations are known to increase rapidly making it necessary to contact a trained Legacy professional

who can assist you with the strenuous extermination required.

**Earwig Pest Control:** Not many people favor the idea of an earwig attempting to burrow inside of their ear, and find the idea rather upsetting. Earwigs typically inhabit areas near a water source like bathrooms and kitchens. Legacy Pest professionals rid homes of these pests by utilizing pet-friendly sprays and by focusing on the treatment of entry points.

**Silverfish Pest Control:** These pests, like humans, enjoy carbohydrates and are usually found in moist areas, but they can feed on anything such as book glue, wet clothing, paper, shampoos, starches, and sugar. Exterminating silverfish upon the first sighting is the best way to prevent infestation and will speed up the benefits of the pesticide.

**Small Rodent Pest Control:** Bats, mice, rats, and squirrels are not only frightening to confront within your home or business, but they also carry, in some cases, life-threatening diseases that are transferable to your family members and pets. Legacy Pest Control will not only help you to treat and eradicate the problem but also create an individualized strategy for small rodent prevention.

**Spider Pest Control:** are usually harmless to humans and may even assist with the capture of small flying insects, but oftentimes, even the harmless spiders are quite surprising to come across within a home or business. Moreover, there are a few breeds of spiders that carry illness with bites that cause rapid death. Treating and eradicating your home of spiders is the safest way to avoid health risks. Legacy Pest Specialists will remove your spider problem and create a system of prevention by treating the infestation with family and pet-friendly sprays.

**Termites Pest Control:** Termite infestation can change the actual structure of a building, and it is costly and damaging for home and business owners. Termites destroy wood and make places unsafe to live and dwell in. Legacy professions will not only remove the infestation but also advise you on any necessary repairs.
